

# ISEE 2012

# Educating the Engineers of Tomorrow

4th International Symposium  
of Engineering Education  
19 - 20 July 2012

Τὰ πάντα ρεῖ καὶ οὐδὲν μένει

"Everything flows and nothing remains the same."

### Teaching Engineering: Can we do it better?

There are many techniques for improving the education of engineering graduates and everyone at this conference will probably have engaged with at least one, and knows of many more. We will hear further examples during the conference sessions.

**Opening Keynote - Prof Peter Goodhew, University of Liverpool**

Education is a non-linear, complex, multifaceted activity and the aim of this symposium, organized by our community of educators in the field of engineering, is to bring together practitioners and students to discuss the wider possible spectrum of experiences, practices and knowledge transfer, in order to drive to new heights the continuous spiral of accumulated engineering educational knowledge.

- ✓ Curriculum development, including accreditation and regulations
- ✓ Employability
- ✓ Internationalization/mobility
- ✓ Learning technologies
- ✓ Learning spaces
- ✓ Feedback and assessment

*Educational Innovation*
